OBJECTIVE

Game Technology student with a background in Electronic Engineering, combining software development experience (IoT dashboards, web apps, embedded systems) with hands-on game development across Unity, Godot, OpenGL, raylib, and three.js. Comfortable moving between low-level systems work and interactive real-time projects.

EDUCATION

Universiti Teknikal Malaysia Melaka (UTeM)

- Bachelor of Information Technology (Game Technology)

Politeknik Port Dickson

- Diploma in Electronic Engineering (Computer)

SKILLS

Engines & Runtime

- Unity
- Godot
- OpenGL
- raylib
- Three.js

Languages & Platforms

- C
- C++
- Xojo
- Visual Basic
- SQL

Systems & Concepts

- FSM / Behaviour Trees
- Pathfinding
- PCB Design & Soldering
- ESP32 / Arduino
- IoT / Modbus / Node-RED

Soft Skills

- Problem Solving
- Cross-team Collaboration
- Self-directed Learning

PROJECT HIGHLIGHTS

Custom Game-Dev Workstation (raylib / C++)

- Built a sprite editor, animation editor, and level editor — essentially a self-made game engine to speed up my own development.

FSM-Driven Horror Game (Unity)

- Combined a finite state machine, a behaviour tree, an event-driven trigger-and-random-response system, and pathfinding for enemy AI.

Fishing Tycoon (Three.js)

- A browser-based fishing tycoon game — sail out, cast a line, manage your money, and clear contract quotas.

EXPERIENCE

Institute of IR4.0, Universiti Kebangsaan Malaysia — Web Developer

- Built a web app for the myHealth digital health-monitoring platform.
- Designed and prototyped the interface for the Waris project, an international digital heritage preservation system for Qatar.
- Built a Solar Agrivoltaics monitoring app combining agricultural and solar panel data.

Enomatrix Solutions SDN BHD — Junior Software Developer

- Built a factory monitoring dashboard using the Modbus protocol and Node-RED to track electrical usage in real time.
- Developed a web app and assisted with server setup for a Door End-of-Line Tester project for Porsche Automobil Holding SE.
- Built web systems for the MyMata monitoring platform and assisted on PanduMy, a platform for driving license applicants and training management.
